

ANNUAL

REPORT

SPDA 2018

SPDA

ANNUAL REPORT 2018

From the Director

I am pleased to present our Annual Report for 2018. It has been a year of new challenges, opportunities and alliances as we move forward with the Peruvian environmental and regional agenda. Some of the most significant highlights of the year were Peru becoming the first South American country to pass a Framework Law on Climate Change; the enactment of a law to regulate single-use plastics; and the signing of the Escazú Agreement to promote access to information, citizen participation and environmental justice. Progress was also made on the indigenous land rights agenda, and new and valuable natural protected areas were established, such as the Yaguas National Park.

SPDA remains committed to contributing to informed dialogue and generating practical models for a fair, sustainable and

happy country at all levels. To achieve this, we must continue to strengthen institutions and governance; and, above all, empower our citizens to exercise their environmental rights.

This work is only possible through close collaboration with public institutions, civil society, indigenous peoples and cooperation with those we work with on a daily basis. I am grateful to all of those who have placed their trust in us and showed that joint efforts can bring about change and quickly transform reality. In particular, I am grateful to the staffs of SPDA, who, with their talent, commitment and enthusiasm, enable us to continue building the Peru we all want.

Pedro Solano
Executive Director

69

Legal opinions and regulatory proposals developed.

+2600

People trained, including authorities, specialists, students and personnel from different institutions.

SOME NUMBERS FROM 2018

Agreements: The Public Ministry – Attorney General of the Nation, Native Federation of the Madre de Dios River and its Tributaries (FENAMAD), Judicial Branch of Peru, Ministry of Culture, Inter-American Institute for Cooperation on Agriculture (IICA), National Environmental Certification Service for Sustainable Investments (SENACE), National Forest and Wildlife Service (SERFOR), Peruvian Amazon Research Institute (IIAP), Ministry of Agriculture (MINAGRI), Ministry of Environment (2), National Service for Natural Protected Areas (SERNANP), Regional Government of Loreto, Regional Government of Amazonas, Regional Government of Piura, National Organization of Andean and Amazonian Indigenous Women in Peru (ONAMIAP), Interethnic Association for the Development of the Peruvian Rainforest (AIDESEP).

OUR WORK

KEY ACHIEVEMENTS

Indigenous Peoples and Territories

We want to consolidate the sustainable management of territories and natural resources, recognizing ancestral knowledge and strengthening legal protection for indigenous peoples.

FACT

We have promoted and contributed to legal recognition of 547,000 hectares of land for native communities and we have 1.5 million hectares in process.

Indigenous peoples and territories

In 2018 we continued to strengthen legal protection for over 2.4 million hectares of indigenous territories. We also contributed to the process of legal titling for 1.5 million hectares of these territories in the Loreto and Madre de Dios regions. This has been achieved through legal opinions and advice to state entities and indigenous organizations.

We also provided legal support to the Native Federation of the Madre de Dios River and its Tributaries (FENAMAD) in submitting the first action for non-compliance with environmental legislation in Peru, to the compliance body of the US-Peru Trade Promotion Agreement (FTA). This action seeks to protect the rights of indigenous peoples in isolation and initial contact (PIACI) when the protected areas they inhabit and their territories are put at risk, as a result of Law 30723., which promotes road construction in the Amazon.

Working with FENAMAD, we developed a strategy to ensure that special rapporteurs of the UN on the rights of indigenous peoples and the Inter-American Commission on Human Rights (IACHR) issue a joint statement regarding the potentially negative effects of Law 30723.

We provided legal and technical advice on the drafting of Supreme Decree 005-2018-MTC, which removes all road projects likely to affect indigenous

reserves, territorial reserves and natural protected areas from the Classification of Routes under the National Highway System.

We also prepared a report on the state of indigenous peoples in isolation and initial contact in Ucayali as well as an updated socioeconomic study of Purús province. We proposed a series of recommendations to encourage the sustainable development of this province. We also implemented a special multimedia product on connection and sustainable development opportunities for the Purús province, where the majority of inhabitants are indigenous peoples.

Finally, together with the Ministry of Culture, we organized, the “Week of Indigenous Peoples in Isolation and Initial Contact”, with a series of events to highlight their present situation, the actions taken to protect them by the state through its specialist bodies, and the challenges that need to be addressed.

(*) The lands of native community territories in Peru are formalized by granting ownership over agricultural land and use-rights over parts that are used for forestry or are protected. This area is demarcated for native communities but with certain nuances due to certain specifications within our legal framework.

NUMBERS

Support with legal titling of more than

1.5 MILLION

hectares to native communities in Loreto and Madre de Dios.

6 regulations on indigenous peoples approved and currently in place.

5 of these regulations seek effective protection of the rights of indigenous peoples in isolation and initial contact.

+400 persons trained.

+20 legal opinions on draft laws and other draft regulations.

Strengthening Environmental Management

Our goal is to consolidate and articulate public policies in a cross-sectorial and intergovernmental way to advance sustainable development of productive activities in Peru.

FACT

Together with several civil society organizations we promoted public debate around the Single-use Plastic Law and contributed to its design. The law was approved in December 2018.

Strengthening environmental management

As in previous years, we provided technical legal support to Congress and the Legislature. We participated in the processes to approve and enact key laws such as the Framework Law on Climate Change and the Law to regulate single-use plastics, which also included approval of the country's first environmental tax (on plastic bags). We participated actively in both cases, in debates and with contributions to the drafts in collaboration with other organizations. SPDA also promoted legal debate on a draft law to protect public spaces.

In the run-up to the regional and district elections, SPDA helped raise political awareness and strengthen environmental democracy, through a series of publications analyzing candidates' proposals in their manifestos. We analyzed regional candidates' proposals relating to water governance, water and sanitation services, and disaster risk management. These documents which included recommendations, were presented in pre-electoral dialogue spaces in four regions around the country. We also analyzed the proposals of the candidates for Mayor of Lima on improving the management of public spaces, sustainable transportation and solid waste management, and made recommendations for developing sustainable cities.

We developed a range of proposals to improve the legal framework relating to strategic environmental evaluation in national planning, the System for Environmental Impact Assessment (SEIA), such as a tool for random review of EIA and the drafting of a glossary of terms; and environmental monitoring, such as the regulation on environmental monitoring and evaluation plans. Additionally, we worked on proposals to ensure adequate environmental standards within environmental protection regulations in strategic sectors.

SPDA continued to support initiatives for citizen participation in the Early Environmental Assessment processes overseen by the environmental monitoring and evaluation body, OEFA, to ensure the active and effective inclusion of communities in decision-making processes.

Last but not least, SPDA continues to provide specialist training for environmental law professionals involved in environmental management in the private and public sectors. We convened the 17th Environmental Law Workshop aimed at students of law and related disciplines, and the 17 edition of the Program of Second Specialism in Environmental Law and Natural Resources, co-organized with the Pontifical Catholic University of Peru.

NUMBERS

15 legal opinions on draft legislation.

4 legal proposals.

14 consultants and public officials of the Congress of the Republic trained.

19 graduates from the Program of Second Specialism in Environmental Law and Natural Resources, co-organized with the Pontifical Catholic University.

34 participants in the course on "Financial management and results-based management" organized with the University of the Pacific.

"Fortal
Cong
ambien

Natural Heritage

SPDA contributed to the sustainable management of our natural heritage, by strengthening the National System of Natural Protected Areas and by promoting innovative mechanisms to protect our oceans and emblematic sites.

FACT

SPDA supported the establishment of the Yaguas National Park, which has an area of more than 868,927 hectares and is of incalculable environmental, cultural and social value.

Natural heritage and biodiversity

SPDA focused its efforts on improving protection mechanisms for protected areas in Peru. We participated in the establishment of the board of the Pacaya Samiria National Reserve's management committee in Loreto, to build the capacity of the Reserve's committee.

Additionally, we supported the consolidation of the first payments for water ecosystem services mechanism in an area between the departments of Ica and Huancavelica with a regional association.

SPDA conducted the first risk cost/benefit analysis of a financial mechanism for the National System of Natural Protected Areas by the State (SINANPE). We also developed the first impact assessment study of a financial mechanism in terms of community wellbeing for SINANPE.

In 2018 we also supported the establishment of Yaguas National Park (Loreto) and two regional conservation areas: the Marañón Dry Forests (Amazon) and the Shunté and Mishollo Forests (San Martín).

NUMBERS

11

draft legislative proposals for the conservation of natural protected areas in Loreto.

5

legislative proposals to recognize the executive commissions of management committees of four regional conservation areas in Loreto.

139

consultations relating to conservation instruments, titling of land on indigenous territories, access to resources, legal environmental questions, among others.

Forest Governance

We seek to protect and value our forests, as well as the ecosystem services they provide, contributing to the reduction of deforestation and strengthening capacity for the sustainable management of forest resources.

FACT

More than 100,000 hectares of primary forest in Madre de Dios benefit from a monitoring system: Environmental Alert – Chestnuts, confronts illegal activities that threaten chestnut producers.

Forest governance

SPDA supported the National Forest and Wildlife Service (SERFOR), the Supervisory Organism for Forest and Wildlife Resources (OSINFOR) and regional governments in the development of an agreed methodology to create regulations based on evidence and participation. Likewise, together with SERFOR, we worked on a systematization model for legal opinions in a format accessible to decision-makers and legal practitioners.

In Madre de Dios, we supported the creation of Environmental Alert – Chestnuts, a monitoring system to address illegal activities that threaten chestnut producers (who own almost 100,000 hectares of primary forest). This was in alliance with PROFONANPE.

In the same region, SPDA provided support to the Rainforest Connection Project in installing an innovative alert system for illegal logging, on treetops, using cell phones that are no longer in use. This innovative initiative won the “Best Innovation for Development” prize, awarded by The Spindle, a platform that promotes initiatives focused on the construction of a fair, inclusive and sustainable world.

In Loreto, SPDA supported communities in the Panguana 1 and 2 localities, as well as Tamshiyacu, through participatory workshops and meetings with bodies such as the Ombudsman’s Office, the Regional Government of Loreto, and the Prosecutor’s Office, among others, to protect their rights in the face of illegal deforestation activities and land dealing. SPDA also supported MINAM and SERFOR in implementing regulations to close the loopholes that allow agro-industries to deforest in the Peruvian Amazon.

NUMBERS

+1450

trainees at workshops and discussions, including students, public officials and the general public, through 23 events.

8

legal opinions and proposals.

Environmental Justice

SPDA promoted and developed public policies and interventions to enable citizens to enjoy a healthy and safe environment in harmony with nature, from a preventive, action-based and proactive perspective.

FACT

We input to the design and implementation of the **Madre de Dios Pact for Environmental Justice**, which was led by the Judiciary and signed by all of the state authorities and was delivered to Pope Francis during his visit to Madre de Dios.

Environmental justice

Through continued work since 2010, together with MINAM and the Ministry of Foreign Affairs, SPDA contributed to the adoption of the Regional Agreement on Access to Information, Public Participation and Justice in Environmental Matters, also known as the “Escazú Agreement”, which was signed by Peru and other Latin American and Caribbean countries.

We also took action to support citizens’ rights through our Free Legal Clinic. In 2018, SPDA took part in proceedings on unconstitutionality proceedings against an ordinance of the Municipality of Lince, which restricted the use and enjoyment of Parque Castilla, a public park. Additionally, experts in Madre de Dios, Loreto and Piura provided legal support to citizens on issues regarding the violation of environmental rights.

Likewise, SPDA participated in legal actions to close down the Maynas landfill, which affects the buffer zone of the Allpahuayo Mishana National Reserve in Loreto.

In 2018, we co-organized the Second International Congress on Environmental Justice in Ucayali, organized a training program for the judiciary, participated in an event sponsored by Interpol on forest crime, and conducted a training program for SERFOR.

We also established the first emergency fund for environmental defenders of the Tambopata National Reserve Management Committee, with the support of IUCN Holland. We are the first organization in Peru to implement a training program on protection and security for environmental defenders. This was developed with support from International Protection.

NUMBERS

86 consultations at the Free Legal Clinic on issues relating to violation of environmental rights.

14 procedural actions.

48 forest users (chestnut concession holders) trained on issues of access to environmental justice, through four workshops.

132 participants in the “1st Training Program for Members of the Judiciary on Environmental Issues and Natural Resources”.

30 cases of legal support for the defense of private conservation areas in the Amazon.

Marine Governance

SPDA developed mechanisms to address illegal fishing. We also lead legal and policy reform processes required for responsible management of fisheries and marine conservation in Peru.

FACT

Following a [media report in Actualidad Ambiental](#), and action by SPDA's Legal Clinic, a fine was imposed on the company Hayduk for disposing of dead fish in the ocean.

Marine governance

In 2018, SPDA sent recommendations to the Ministry of Production to strengthen their regulations on prohibition of illegal fishing activities, address construction of illegal vessels and develop regulations on the extraction of benthonic resources. This was undertaken in alliance with The Nature Conservancy.

We signed an inter-institutional cooperation agreement with the Regional Production Directorate of Piura Region, to provide legal assistance and strengthen its capacity in environmental and fisheries matters. The purpose of

working with the directorate is to facilitate greater access to justice for artisanal fishers and others in this sector.

SPDA also organized the first decentralized Fisheries and Aquaculture Forum in Piura, together with WWF. A roundtable was held on illegal fisheries at the Congress of the Republic, with the Peruvian Conservation Caucus Initiative. Presentations were made on the implementation of Legislative Decree 1393 (prohibition of illegal fisheries activities) and related issues.

NUMBERS

+280

people trained at national level, including authorities, members of Congress, artisanal fishers, students and the broader audience.

232

administrative sanction proceedings filed in support of the Regional Production Directorate of Piura.

6

cases sponsored by the Free Legal Clinic in Piura on issues related to oil spills and illegal fishing.

Water Governance

SPDA promotes the conservation, restoration and recovery of ancestral techniques and the sustainable use of ecosystems, in order to reduce water-related risks such as droughts, flooding and pollution.

FACT

We contributed to the legal reform on establishing councils for river basins, recommending that community users be represented in the councils.

Water governance

During 2018 SPDA extended its activities to include work on issues such as natural infrastructure and water security in order to contribute to water governance and justice in Peru. As part of this process, under the Natural Infrastructure for Water Security Project, SPDA promoted the conservation, restoration and recovery of ecosystems at the national level, forming alliances with public and private organizations to reduce water risks such as droughts, flooding and pollution.

Also in 2018, in an initiative led by the National Water Authority, SPDA produced key information and research which led to modification of the Water Resources Law. This amendment enables community users to participate in Water Resources Councils for River Basins, as part of the institutional consolidation of this decentralized water authority. Thus, through the participation of community representatives in these dialogue spaces, there are more opportunities to contribute to sustainable water management, and water users have more opportunities to contribute to protecting the constitutional right of access to water

LIBRARY

Since 2018 SPDA's Library has been included in the National Library System administrated by the National Library of Peru. This allows the institution to disseminate its research and publications throughout the country via the library network system.

In 2018, we also participated in two of the most important book fairs in the country, where we disseminated SPDA's most recent publications, produced through SPDA's Editorial Fund.

CONSERVAMOS POR
NATURALEZA
WWW.CONSERVAMOS.ORG

We Conserve for Nature organized the XII Latin American Convention on Private Natural Resources in the Amazon. The event brought together 96 participants from 10 countries, 11 voluntary conservation networks, 9 campesino communities and 44 owners of land on reserves.

The Convention focused on: financial sustainability, technological innovation for effective reserve management, communications and policies, and legal frameworks. This movement formally represents at least 4,000 title owners who manage more than 4 million hectares of land in Latin America.

PERCENTAGE FOR AID %

Three partners joined the campaign “Percentage for aid”, in which companies donate a percentage of their sales to different conservation projects in private protected areas. In 2018, Andina Alimentos donated 2% of their sales of “Jugos Selva” juice to the ACP Amazon Shelter, raising a total of 12,000 Soles to provide support in the recovery and care of animals in the rehabilitation center.

We were represented at several international events: Global Wave Conference, Santa Cruz (USA), TedxTukuy (Lima), World Leaders Conservation Forum IUCN (South Korea), Waterkeeper Alliance Meeting (USA.), Futurismo (Chile), Nexos+1 (Lima) and the Conference of the Parties of the Convention on Biodiversity.

Do it for your beach celebrated its 6th year

4,000 volunteers in 2018

160 leaders, 30 tons of waste collected in

153 areas, located in **22 departments of Peru**,
in addition to Paraguay and Mexico.

Do it for your wave

7 new protected waves in 2018.

Amounting to **33 waves across the country**.

Pacasmayo in La Libertad and Santa Rosa, El Huaico, Peña Rosa, Peñascal, Muelles de San Bartolo and San Bartolo in the south of Lima, have now been added to the list of protected breakers.

A LA MAR

In alliance with Patagonia, Do it for your Wave, released the documentary A la Mar and won the “Exploration and Adventure” category at the Mountain Film Fest organized by The North Face. In 2018 it was watched by more than 2,000 people at different presentations and festivals.

Perú Natural: Sustainability in business

A conference was convened with 450 participants, 13 speakers, 11 presentations.

Kuyapanakuy Environmental Film Festival

More than 600 people came together at the Olaya cinema (Chorrillos) and at “Cine Bajo las Estrellas” (Miraflores).

449 trees were adopted through the Reforesting for Nature campaign. The beneficiaries were the Bosque Berlín and Cavernas de Leo private conservation areas, and the Ojos de Agua conservation concession.

10 new civil society–company alliances, to strengthen voluntary conservation and promote tourism.

99% increase in sales of products from natural protected areas, in alliance with Shiwi.

The **AMA Network raised US\$25,000** from training conducted by CxN.

January 2017 March 2019
International Union for Conservation of Nature (IUCN)	An emergency fund for environmental defenders of the Management Committee of Tambopata National Reserve.	Support the defenders to enable them to carry out their work safely, through information, providing security, training them to protect themselves and promoting them internationally.	August 2018 March 2019
US Fish and Wildlife Service	The reduction of deforestation in communally owned land in the Amazon, through improved zoning and pastoral systems, and compensation mechanisms for ecosystem services.	Contribute to reducing deforestation in the private conservation area Bosque de Palmeras and the Gocta Falls.	September 2018 September 2019
USDA Forest Service	Support to strengthen the legal and institutional framework for forestry concessions and permits with a focus on the Departments of Loreto and Ucayali (2018).	Strengthen forestry authorities (mainly SERFOR and GORE) to enable them to produce a methodology and implement the regulatory framework for Law 29763 and its four regulations.	January 2018 October 2021
Walton Family Foundation	Towards more sustainable fishing in Peru, through improved regulations, compliance with the law and transparency.	Promote reform of the legal framework for fisheries in Peru in order to support management based on rights for artisanal fishing, as well as the formalization of artisanal fishers. Additionally, design guidelines for representation of artisanal fishing communities, support the regional government of Piura, provide technical assistance to the Ministry of Production (PRODUCE) and contribute to improving compliance around minimum landing sizes.	October 2017 September 2019
World Wildlife Fund (WWF)	Strengthening actors related to private conservation in Latin America through capacity building in communications, business and innovative technologies in Chachapoyas, Peru.	Support to implement a workshop on new skills in communication, business and new technologies within the framework of the Latin American Congress on Private Natural Reserves.	July 2018 November 2018
